SIMPANAN
PEKERJA

What Problem Faced by Malaysian

THE 4X MULTIPLIER

Four tasks (Road tax, Income tax, PTPTN, EPF) = Four websites, four logins, four repetitive data entries.

HIGH FRICTION

Complex portals, confusing jargon, and poor UX.

SECURITY ANXIETY

Uploading raw, unprotected ICs to multiple platform.

THE BARRIER

Excludes seniors, first-time taxpayers, and non-tech-savvy citizens

WHY now?

GovEase AI must exist today!

AI has finally reached the point where it can understand context, not just scan text. Meanwhile, Malaysia is pushing for digital ID adoption (PADU), but public skepticism around data security is at an all-time high. GovEase AI bridges the gap between advanced AI capabilities and the immediate public need for privacy.

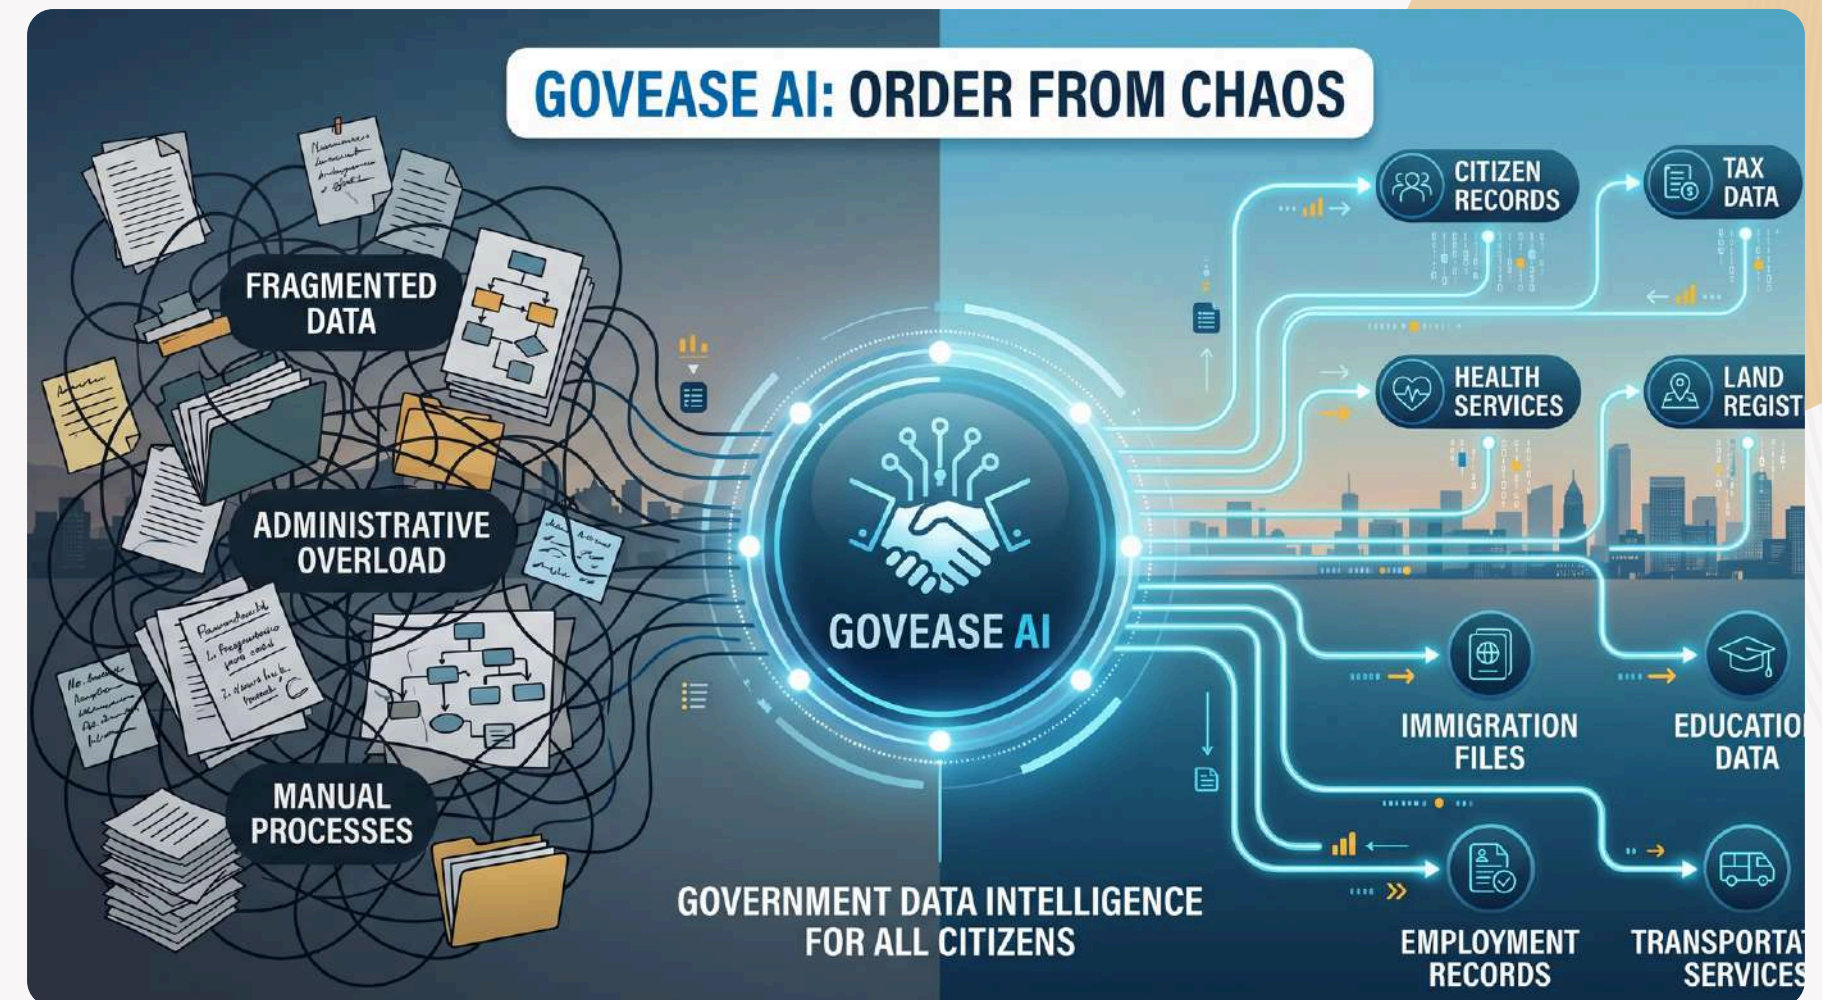

The solution

One Interaction. Infinite Portals.

A multi-agent AI ecosystem that acts as your personal digital liaison.

You do the parts that matter (review and confirm). GovEase handles the repetitive, confusing and time-consuming data entry.

The architecture

The three agents.

The Concierge

The conversational front door. WhatsApp/Telegram-style UI. Powered by GLM for high-accuracy OCR. No forms, just chat.

The Guardian

The security layer. Automatically applies department-specific watermarks (e.g., "FOR LHDN USE ONLY").

The Executor

The browser co-pilot. Maps local data, auto-fills 47+ fields in seconds. You only handle the CAPTCHA and submit.

Our Agent Includes :

THE CONCIERGE

THE GUARDIAN

THE EXECUTOR

An ecosystem Working on You. ✨

The User Journey in Action

4 STEPS TO SEAMLESS COMPLIANCE

STEP 1 CAPTURE ONCE

Send IC/salary slip via chat. Concierge extracts & stores locally.

STEP 2 PROTECT ALWAYS

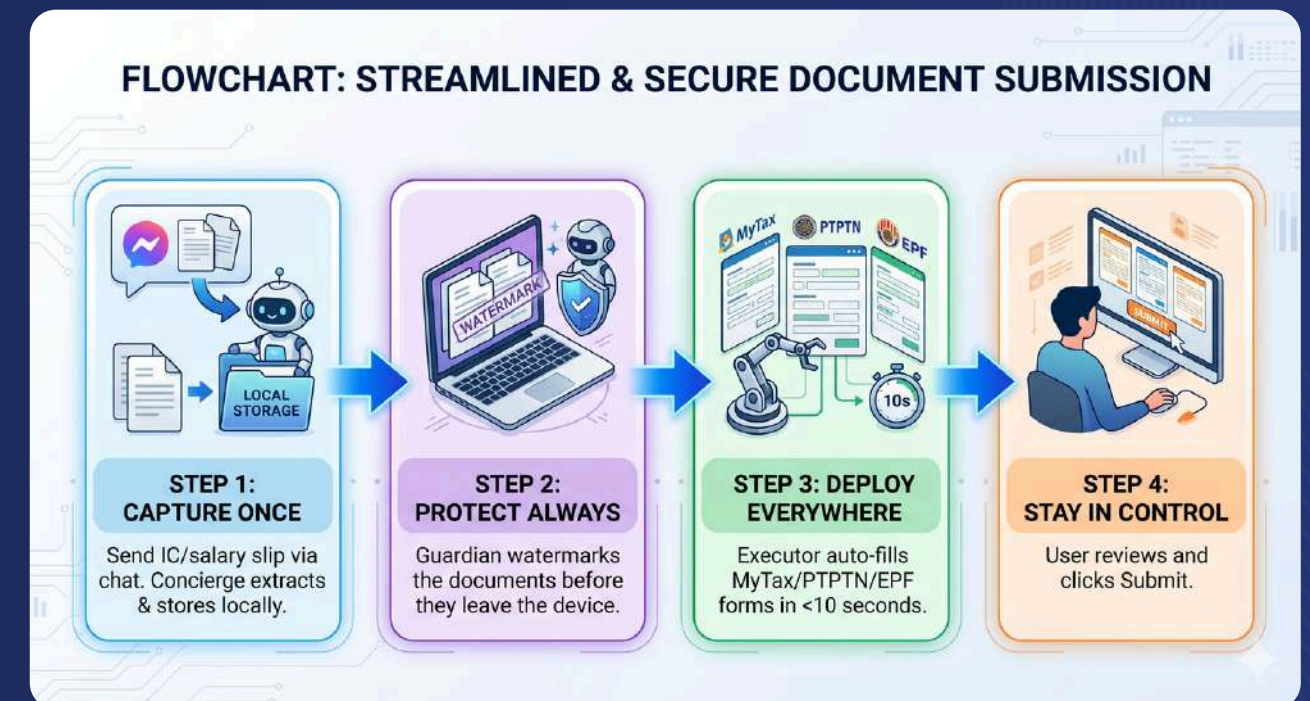

Guardian watermarks the documents before they leave the device.

STEP 3 DEPLOY EVERYWHERE

Executor auto-fills MyTax/PTPTN/EPF forms in <10 seconds.

STEP 4 STAY IN CONTROL

User reviews and clicks Submit.

Security Deep-Dive

THE TRUST FACTOR

LOCAL STORAGE

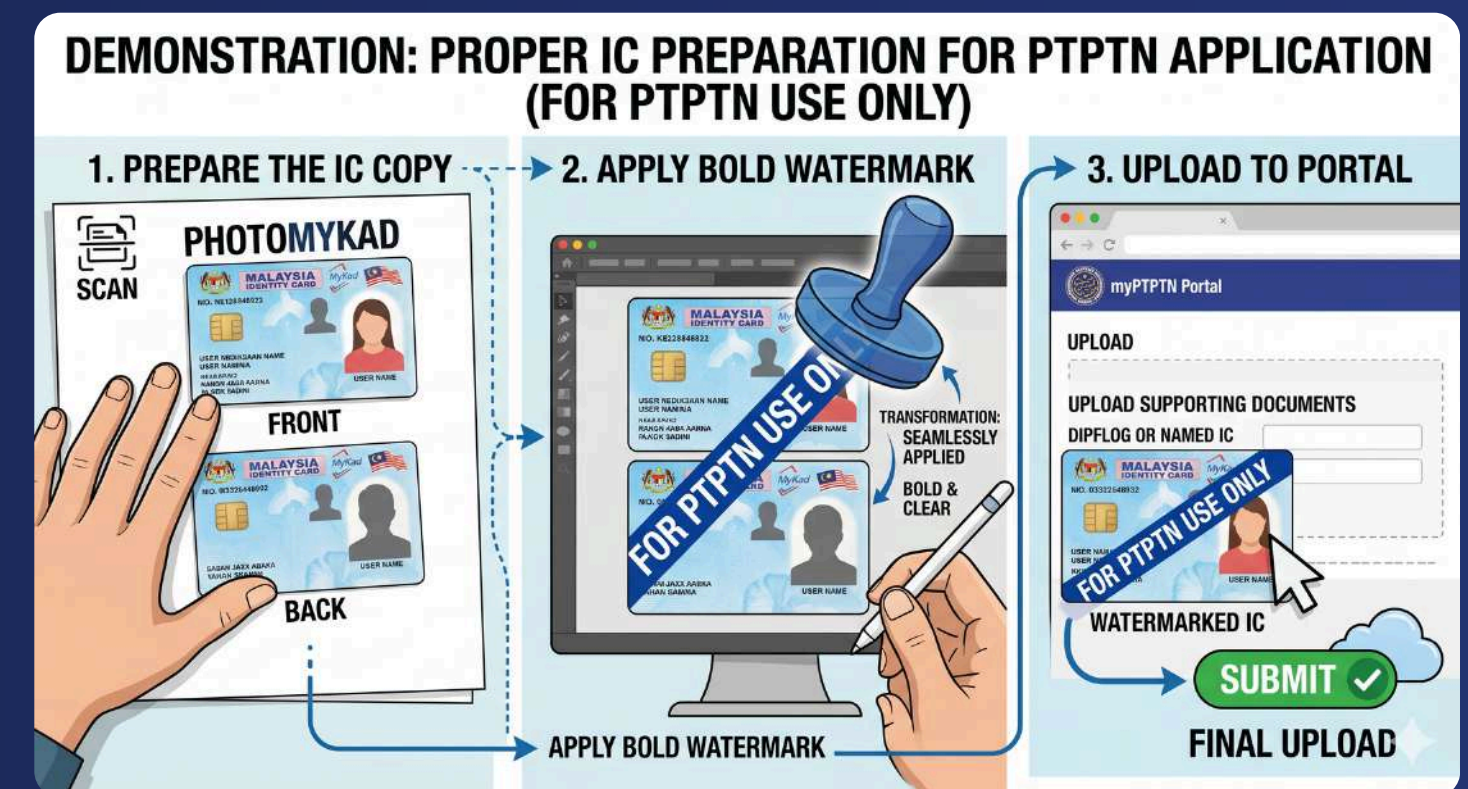

Data stays on the user's device until needed.

THE GUARDIAN FEATURE

Crucial selling point. No existing government portal offers automated, purpose-bound watermarking.

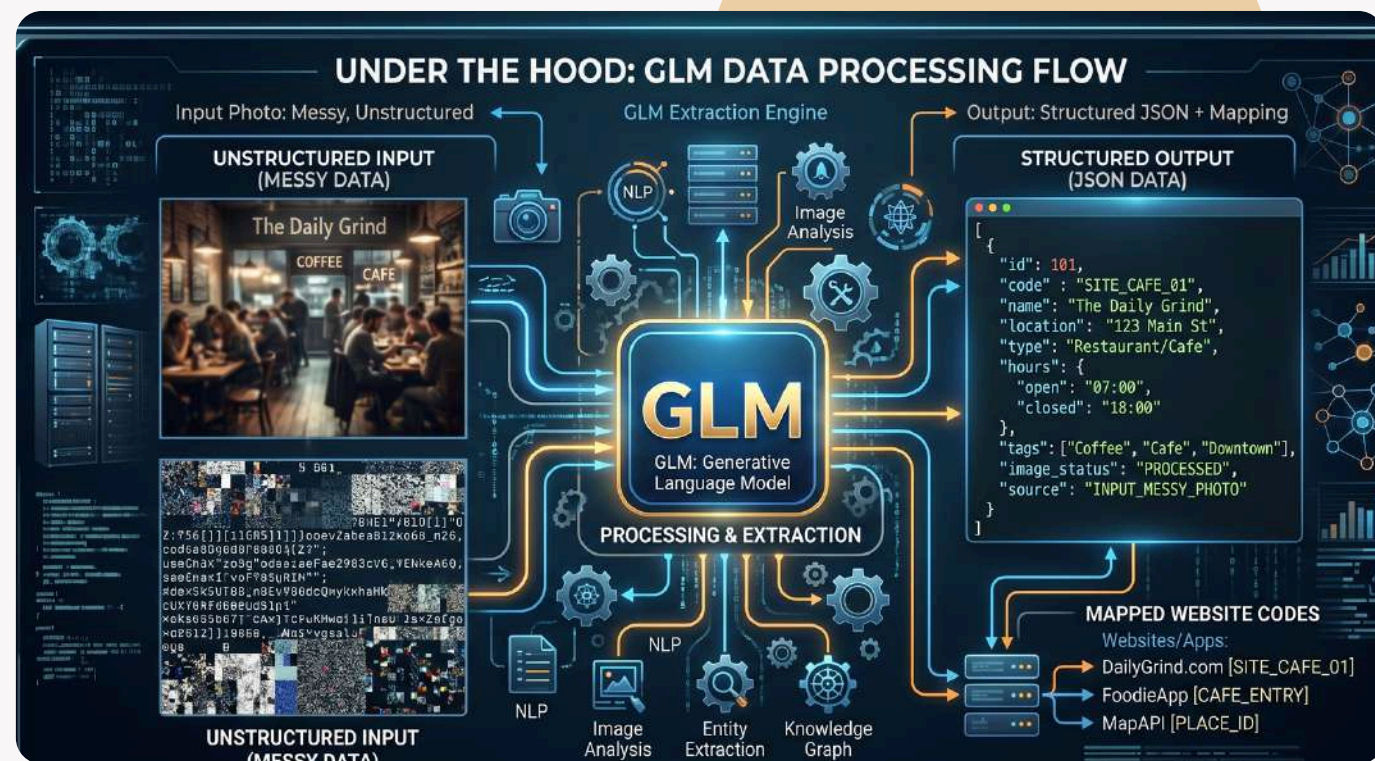

IDENTITY PROTECTION

ICs can never be screenshotted and misused for other purposes

The “Secret Sauce” – Truly Agentic AI

This is not Automation. This is an Agency.

Contextual Perception

Knows the difference between the LHDN tax form and a PTPTN loan form.

Cross-Portal Planning

Adapts to layout changes and missing fields seamlessly.

Powered by GLM

Uses advanced reasoning to parse unstructured data, map form fields, and generate smart watermarks.

Amira (20s, Malay)
mamak stall (Puchong)

Nisha (30s, Indian)
crowded commuter train
(LRT, Kuala Lumpur)

Uncle Tan (60s, Chinese)
'FAMILY V-CALL'
